The human brain grows to 85% of its adult size between conception and age 3. Ensuring healthy development during these years benefits the children, their families and society over a lifetime. Dialog with a panel of experts in the morning. Then select a deeper focus for the afternoon on either babies & toddlers (birth -2) or toddlers & twos (18 mos. – 3 years) for a more in-depth look at strategies for supporting development specifically in those age ranges.
