Dental Health Care

Here is important advice to help your child stay healthy:

- Take your child to the dentist twice a year.
- Choose healthy foods for the entire family. Fresh foods are usually the healthiest foods.
- Brush teeth at least twice a day with toothpaste that contains fluoride.
- Limit candy and sweet drinks, such as punch or soda. Sweet drinks and candy contain a lot of sugar, which causes cavities and replaces important nutrients in your child’s diet.
- Sweet drinks and candy also contribute to weight problems, which may lead to other diseases, such as diabetes.

The less candy and sweet drinks, the better!

Baby teeth are very important. Children need their teeth to eat properly, talk, smile, and feel good about themselves. Children with cavities may have difficulty eating, stop smiling, and have problems paying attention and learning at school. Tooth decay is an infection that does not heal and can be painful if left without treatment. If cavities are not treated, children can become sick enough to require emergency room treatment, and their adult teeth may be permanently damaged.
